Data Sheet

Eurosil 1907

Silicate interior paint, low-emission, solvent- and plasticizer-free, dull matt, wet abrasion resistance Class 3

Field of application

For high-quality ceiling and wall coats, e.g. interior plaster, concrete and sand-lime brickwork. Object silicate interior paint, particularly suited for silicificating mineral substrates. After applying a prime coat for adhesion promotion, including on gypsum plasterboard, matt dispersion paints etc. can be used.

Properties

- Low-emission solvent- and plasticizer-free
- Complies with the requirements of the Committee for the Health-related Evaluation of Building Products (AgBB)
- No preservatives
- Free of fogging-active substances
- Silicate dispersion paint in accordance with DIN 18363
- Highly diffusible, corresponds to Class I in accordance with DIN EN ISO 7783
- Good hiding power
- Low odor
- Can be processed in airless spray application
- Bonds to the substrate by silification

Material description

Standard color shade	0095 white
Base material	Potassium water glass with organic stabilizers
Organic content	< 5% in accordance with DIN 18363, 2.4.1.1
Density	approx. 1.5 g/cm³
Ph value	approx. 11
Classified according to EN 13300	- Wet abrasion resistance: Class 3 - contrast ratio: class 2 at 6 m²/l - Gloss: dull matt - Maximum grain size: fine

Material description

Reaction to fire
A2 – s1,d0 in accordance with DIN EN 13501-1 (“nichtbrennbar”, non-combustible), in accordance with classification report no. 230011570-3
In system build-up with Briplast filler material according to classification report no. 230010838-3.

Water vapor permeability
Diffusion-equivalent air layer thickness: S_d (H_2O) < 0.03 m, in accordance with DIN EN ISO 7783, corresponds to Class V_1 “highly water-vapor-permeable” in accordance with DIN EN 1062-1

Water vapor diffusion current density
P ≥ 2000 g/m²d

Packaging
15 l

Use

Dilution
Where necessary, with a mixture of Fondosil 1903 and water (mixing ratio 1:1).

Tinting
Tintable up to max. 25 % with Vitamix 9018. Note that the color shades dry lighter.

Compatibility
Can only be mixed with similar materials and those stipulated in this data sheet.

Application
Before use, stir thoroughly with an electric stirrer. Eurosil 1907 can be applied by using a brush, roller and airless spray application.

Consumption
Approx. 150-170 ml/m² per layer.
Determine the exact consumption by means of a test application on the object to be coated.

Application temperature
Do not apply at an air and object temperature below +8 °C.

Cleaning tools
Clean tools immediately after use with water.

Spray data

Spray system	Nozzle	Spraying angle	Pressure	Dilution
High-performance airless system	0.021–0.027 inch	40°–80°	depending on the spraying device and individual requirements	5-15 %

Drying (+20 °C, 65% relative humidity)

Surface-dry and can be processed after approx. 4 -6 hours. Final silification after several days. Allow longer drying times at lower temperatures and/or higher air humidity.

Storage

Store in a cool and frost-free place. Reseal opened containers tightly.

Declaration

Note
Do not inhale spray mist.

Product code
BSW10
Comply with the specifications in the current Safety Data Sheet.

Coating build-up

Substrate pretreatment

The substrate must be solid, dry, clean, load-bearing, and free from efflorescence, sinter layers, separating agents, corrosion-promoting, or other intermediate layers affecting the adhesion. Check existing coatings for their suitability, load-bearing capacity, and adhesive properties. Thoroughly remove defective and unsuitable coatings and dispose of them in accordance with the applicable regulations. Thoroughly wash off limepaint. Treat replastered areas with a fluorine primer, over the entire area for colored coatings. Apply a prime and/or intermediate coat to the substrate as required. Also see VOB Part C, DIN 18363, Section 3.

Coating build-up

<table>
<tr><th>Substrates</th><th>Prime coat</th><th>Intermediate coat [3)]</th><th>Top coat</th></tr>
<tr><td>Normally absorbent substrates, e.g. interior plaster (compressive strength category CS I–CS IV) [1)]</td><td rowspan="3"></td><td rowspan="3">Eurosil 1907, thinned where necessary</td><td rowspan="5">Eurosil 1907</td></tr>
<tr><td>Brillux woodchip wallpaper 31, 51 and 71</td></tr>
<tr><td>Intact, matt emulsion paint coats</td></tr>
<tr><td>Highly absorbent substrates, e.g. interior plaster (compressive strength category CS I–CS IV) [1)],concrete, sand-lime brickwork, intact silicate paint coats</td><td>1–2x wet in moist Fondosil 1903 and water in mixing ratio 1:1</td></tr>
<tr><td>Intact, gloss emulsion color coatings</td><td>Adhesion Primer ELF 3720</td><td rowspan="2">Depending on the individual requirements, Eurosil 1907, thinned as required</td></tr>
<tr><td>Gypsum plaster compressive strength category B1–B7), gypsum plasterboard, gypsum wallboard</td><td>Wall Primer ELF 3729 or Wall Primer coarse ELF 3728 [2)]</td></tr>
</table>

[1)] Minimum compressive strength > 1,5 N/mm²

[2)] Prime soft and highly absorbent filler zones and substrates with Lacryl Deep Penetrating Primer ELF 595 as part of the substrate preparation.

[3)] If filling or texturing properties are required, use Silicate Brush-On Filler ELF 3639 or Klimasil 1908 as an intermediate coat.

Notes

Mask surfaces	Mask the surroundings of the surfaces that are to be coated carefully, especially glass, brick and natural stone.
Cracks and flawed areas	Fill cracks and indentations flush with surface after priming with a fillable mixture of silicate paint and quartz sand. Re-prime filled areas. Re-plaster larger flawed areas in the substrate.
Smoothening rough surfaces	Smooth rough surfaces before the coating build-up by filling them with, e.g. Briplast Mineral Hand Applying Light Filler ELF 1886, as required.
Priming gypsum plaster	For gypsum plasters with high absorbency, an adequate stabilization is not always achieved. We recommend checking the adhesion of the complete coating build-up with an adhesive tape test (e.g. Tesa Precision Masking Tape, gold 4334) to ensure a reliable assessment. Deep penetrating primer should be used where necessary.
Discolorations of gypsum plasterboard	An additional sealing coating should be applied if there is a risk of discolorations penetrating through the untreated gypsum plasterboard. Use e.g. Isolating Primer 924 for this depending on the situation on site. For an accurate assessment, sample coatings of various board widths, including the joints and filled areas, have proven to be useful.
Gypsum fillers on gypsum plasterboard	The gypsum fillers recommended by gypsum plasterboard manufacturers can be particularly susceptible to moisture, which can result in swelling, bubble formation, and flaking (see also Data Sheet 2 “Filling of gypsum plasterboards, surface qualities” Trade Association of the German Gypsum Plasterboard and Wallboard Industry). It is therefore important to ensure adequate ventilation and appropriate temperatures for rapid drying.
Compatibility with sealing compound	When coating sealing compounds, e.g. acrylic sealing compounds, cracks may occur in the coating material due to the higher elasticity. Discolorations may also occur in the coating. Due to the wide range of sealing compounds available on the market, self-tests must be carried out to assess the adhesion and the processing result in each individual case.
Repairs	Repairs to the surface become more or less strongly apparent depending on the situation on the site. According to BFS Leaflet No. 25, Item 4.2.2.1, Section e, this is unavoidable.
Surface irregularities after drying	Due to the chemical curing process, different discolorations and surface irregularities may occur in unfavorable object parameters, combined with e.g. uneven substrate absorbency, differences in substrate humidity and alkalinity or ingredients in the substrate. This does not constitute a technical-functional defect and does not justify complaint.
Use in incidence of grazing light	On smooth surfaces with special lighting conditions (grazing light), we recommend using Kalisil 1909 or alternative special interior emulsion paints, such as Glemalux ELF 1000, Superlux ELF 3000 or Vitasense 9005 – preservative-free.
Further information	Follow the instructions on the data sheets of the products used.
